Chapter 1

Main Page

Welcome to the Programmer's manual for the Thunder Kracken's MPX Operating system. This document catalogues all of the information one may need to know regarding the use and modification of this Operating system and its contents. Included is a complete API of every method created for the operating system which includes all inputs and outputs as well as a brief summary of the purpose of each method. This will give you a more in depth look at all of the ordinary user commands as well as the internal commands used to perform functions that normal users cannot access. Most likely these commands will be the most important for making new programs on the operating system. This document also lists the documentation for the files files in the operating system. This includes all of the variables and methods used in each file. These will help direct you as to where certain functions are defined. For general usage tips, please refer to the user manual. We hope you find working with the Thunder Kracken's MPX Operating System as enjoyable as we do and we thank you for using our product.

Chapter 2

Data Structure Index

2.1 Data Structures

Here are the data structures with brief descriptions:

function_name	A structure to represent each function	7
pcb_queue	Queue structure that will store PCBs	8
pcb_queue_node	The PCB queue node will represent the PCB within pcb_queue and point to previous/next PCB nodes	9
pcb_struct	Struct that will describe PCB Processes	11

Chapter 3

File Index

3.1 File List

Here is a list of all files with brief descriptions:

include/ string.h	Many usefull functions that used for handling string	16
include/core/ serial.h	Serial - Header	13
lib/ string.c	Many usefull functions that used for handling string	24
modules/ errno.h	This file contains the type of errors. The error can be from invalid paramter passed to a function, or invalid input format	32
modules/r1/ r1.c	The commandhandler and functions associations for Module R1	33
modules/r1/ r1.h	The commandhandler and functions associations for Module R1	40
modules/r1/ sys_clock.c	The main file that manipulates and controls the system's clock	44
modules/r1/ sys_clock.h	The main file that manipulates and controls the system's clock	55
modules/r2/ pcb.c	The Process Control Block	65
modules/r2/ pcb.h	The Process Control Block	67
modules/r2/ pcb_comm.c	The main functions that manipulate the PCB	70
modules/r2/ pcb_comm.h	The main functions that manipulate the PCB	71

Chapter 4

Data Structure Documentation

4.1 function_name Struct Reference

A structure to represent each function.

Data Fields

- char * [nameStr](#)
function's name
- int(* [function](#))(int argc, char **argv)
the function
- char * [usage](#)
function's usage or use cases
- char * [help](#)
function's help information

4.1.1 Detailed Description

A structure to represent each function.

4.1.2 Field Documentation

4.1.2.1 int(* function_name::function) (int argc, char **argv)

the function

4.1.2.2 char* function_name::help

function's help information

4.1.2.3 char* function_name::nameStr

function's name

4.1.2.4 char* function_name::usage

function's usage or use cases

The documentation for this struct was generated from the following file:

- [modules/r1/r1.c](#)

4.2 pcb_queue Struct Reference

Queue structure that will store PCBs.

```
#include <pcb.h>
```

Collaboration diagram for pcb_queue:

Data Fields

- int `count`
The length of the queue.
- struct `pcb_queue_node` * `head`
Pointer to the start/head of the queue.
- struct `pcb_queue_node` * `tail`
Pointer to the end/tail of the queue.

4.2.1 Detailed Description

Queue structure that will store PCBs.

4.2.2 Field Documentation

4.2.2.1 `int pcb_queue::count`

The length of the queue.

4.2.2.2 `struct pcb_queue_node* pcb_queue::head`

Pointer to the start/head of the queue.

4.2.2.3 `struct pcb_queue_node* pcb_queue::tail`

Pointer to the end/tail of the queue.

The documentation for this struct was generated from the following file:

- [modules/r2/pcb.h](#)

4.3 pcb_queue_node Struct Reference

The PCB queue node will represent the PCB within [pcb_queue](#) and point to previous/next PCB nodes.

```
#include <pcb.h>
```

Collaboration diagram for `pcb_queue_node`:

Data Fields

- struct `pcb_queue_node` * `prev`
Pointer to the previous PCB in the queue.
- struct `pcb_struct` `actual_pcb`
The PCB process.
- struct `pcb_queue_node` * `next`
Pointer to the next PCB in the queue.

4.3.1 Detailed Description

The PCB queue node will represent the PCB within `pcb_queue` and point to previous/next PCB nodes.

This structure is a doubly linked list.

4.3.2 Field Documentation

4.3.2.1 struct `pcb_struct` `pcb_queue_node::actual_pcb`

The PCB process.

4.3.2.2 struct `pcb_queue_node`* `pcb_queue_node::next`

Pointer to the next PCB in the queue.

4.3.2.3 struct `pcb_queue_node`* `pcb_queue_node::prev`

Pointer to the previous PCB in the queue.

The documentation for this struct was generated from the following file:

- `modules/r2/pcb.h`

4.4 pcb_struct Struct Reference

Struct that will describe PCB Processes.

```
#include <pcb.h>
```

Collaboration diagram for pcb_struct:

Data Fields

- char `name` [10]
PCB's name.
- enum `process_class` `class`
PCB's class is an application or system process.
- unsigned char `priority`
PCB's priority an integer between 0 and 9.
- enum `process_state` `running_state`
PCB's states are ready, running, or blocked.
- enum `process_suspended` `is_suspended`
PCB process is either suspended or not suspended.
- unsigned char * `stack_top`
Pointer to top of the stack.
- unsigned char * `stack_base`
Pointer to base of the stack.
- struct `pcb_queue` * `other_pcb`
Pointer to other PCBs.

4.4.1 Detailed Description

Struct that will describe PCB Processes.

4.4.2 Field Documentation

4.4.2.1 `enum process_class pcb_struct::class`

PCB's class is an application or system process.

4.4.2.2 `enum process_suspended pcb_struct::is_suspended`

PCB process is either suspended or not suspended.

4.4.2.3 `char pcb_struct::name[10]`

PCB's name.

4.4.2.4 `struct pcb_queue* pcb_struct::other_pcb`

Pointer to other PCBs.

4.4.2.5 `unsigned char pcb_struct::priority`

PCB's priority an integer between 0 and 9.

Processes with higher priority values execute before lower priority processes.

4.4.2.6 `enum process_state pcb_struct::running_state`

PCB's states are ready, running, or blocked.

4.4.2.7 `unsigned char* pcb_struct::stack_base`

Pointer to base of the stack.

4.4.2.8 `unsigned char* pcb_struct::stack_top`

Pointer to top of the stack.

The documentation for this struct was generated from the following file:

- [modules/r2/pcb.h](#)

Chapter 5

File Documentation

5.1 documentation/mainpage.dox File Reference

5.2 include/core/serial.h File Reference

Serial - Header.

This graph shows which files directly or indirectly include this file:

Macros

- `#define COM1 0x3f8`
- `#define COM2 0x2f8`
- `#define COM3 0x3e8`
- `#define COM4 0x2e8`
- `#define WithoutEcho 0`
- `#define WithEcho 1`

Functions

- int [init_serial](#) (int device)
- int [serial_println](#) (const char *msg)
- int [serial_print](#) (const char *msg)
- int [set_serial_out](#) (int device)
- int [set_serial_in](#) (int device)

get_input_line

Get user's input from keyboard.

Parameters

buffer	<i>The pointer to the buffer where store the user's input.</i>
buffer_size	<i>The size of that buffer.</i>
bWithEcho	<i>With echo or not</i>

Returns

VOID

- void [get_input_line](#) (char *buffer, const int buffer_size, const int bWithEcho)

5.2.1 Detailed Description

Serial - Header.

5.2.2 Macro Definition Documentation

5.2.2.1 `#define COM1 0x3f8`

5.2.2.2 `#define COM2 0x2f8`

5.2.2.3 `#define COM3 0x3e8`

5.2.2.4 `#define COM4 0x2e8`

5.2.2.5 `#define WithEcho 1`

5.2.2.6 `#define WithoutEcho 0`

5.2.3 Function Documentation

5.2.3.1 `void get_input_line (char * buffer, const int buffer_size, const int bWithEcho)`

Here is the caller graph for this function:

5.2.3.2 `int init_serial (int device)`

5.2.3.3 `int serial_print (const char * msg)`

Here is the caller graph for this function:

5.2.3.4 int serial_println (const char * msg)

Here is the caller graph for this function:

5.2.3.5 int set_serial_in (int device)

5.2.3.6 int set_serial_out (int device)

5.3 include/string.h File Reference

Many usefull functions that used for handling string.

```
#include <system.h>
```

Include dependency graph for string.h:

This graph shows which files directly or indirectly include this file:

Functions

isspace.

Identifies if its space

Parameters

A	constant character
---	--------------------

Returns

1 if it is space, otherwise return 0.

- int `isspace` (const char *c)

memset.

Sets region of memory

Parameters

s	destination
c	byte to write
n	count

Returns

the pointer to the memory space.

- void * `memset` (void *s, int c, size_t n)

strcpy.

Copies one string to another.

Parameters

s1	Destination string
s2	Source string

Returns

pointer to the destination String

- char * `strcpy` (char *s1, const char *s2)

strcat.

Concatenate the contents of one string onto another.

Parameters

s1	Destination string
s2	Source string

Returns

pointer to destination String

- char * [strcat](#) (char *s1, const char *s2)

strlen.

Returns the length of a string.

Parameters

s	String input.
---	---------------

Returns

count Length of the String

- int [strlen](#) (const char *s)

strcmp.

String comparison.

Parameters

s1	First string to use for the compare.
s2	Second string to use for the compare.

Returns

whether they are the same or not.

- int [strcmp](#) (const char *s1, const char *s2)

strtok.

Split string into tokens.

Parameters

s1	String
s2	Delimiter

Returns

the pointer to the token.

- char * [strtok](#) (char *s1, const char *s2)

atoi.

Convert an ASCII string to an integer.

Parameters

s	String.
---	---------

Returns

The converted integer.

- int [atoi](#) (const char *s)

sprintf.

Generate a formatted string.

%[-x]c output a character, '-' - align right, x - the output width

%[-x]s output a string, '-' - align right, x - the output width

%[{-,+}x]d output a character, '-' - align right, '+' - align right and display '+' sign, x - the output width

%[-x]X (capital 'X') output a hexadecimal number, '-' - align right, x - the output width

note: Output width will be ignored if width is smaller than actual length.

Parameters

str	- Output string.
format	- The format of the string.
...	- All of the additional parameters.

Returns

vsprintf(str, format, ap) - Return the string with its format and pointer.

- int [sprintf](#) (char *str, const char *format,...)

printf.

Print out a formatted string.

%[-x]c output a character, '-' - align right, x - the output width

%[-x]s output a string, '-' - align right, x - the output width

%[{-,+}x]d output a character, '-' - align right, '+' - align right and display '+' sign, x - the output width

%[-x]X (capital 'X') output a hexadecimal number, '-' - align right, x - the output width

note: Output width will be ignored if width is smaller than actual length.

Parameters

str	- Output string.
format	- The format of the string.
...	- All of the additional parameters.

Returns

vsprintf(str, format, ap) - Return the string with its format and pointer.

- int [printf](#) (const char *format,...)

5.3.1 Detailed Description

Many usefull functions that used for handling string.

5.3.2.9 `int strlen (const char * s)`

Here is the caller graph for this function:

5.3.2.10 `char* strtok (char * s1, const char * s2)`

Here is the caller graph for this function:

5.4 lib/string.c File Reference

Many usefull functions that used for handling string.

```
#include <system.h>
#include <core/serial.h>
#include <string.h>
Include dependency graph for string.c:
```

Functions

`strlen.`

Returns the length of a string.

Parameters

s	String input.
---	---------------

Returns

count Length of the String

- int [strlen](#) (const char *s)

strcpy.

Copies one string to another.

Parameters

s1	Destination string
s2	Source string

Returns

pointer to the destination String

- char * [strcpy](#) (char *s1, const char *s2)

atoi.

Convert an ASCII string to an integer.

Parameters

s	String.
---	---------

Returns

The converted integer.

- int [atoi](#) (const char *s)

strcmp.

String comparison.

Parameters

s1	First string to use for the compare.
s2	Second string to use for the compare.

Returns

whether they are the same or not.

- int [strcmp](#) (const char *s1, const char *s2)

ParsePadding.

Parse the number for padding.

(static - Only can be access within this file).

Parameters

str	<i>Paddling String</i>
width	<i>Paddling Width</i>
DecWidth	<i>Width of decimal part.</i>
blsRight	<i>Is align right.</i>
bHasSign	<i>Has + / -.</i>

Returns

blsValid Returns the validity.

AddPad.

Add a certain number of paddings (static - Only can be access within this file).

Parameters

str	<i>In string.</i>
count	<i>Number of whitespace.</i>

Returns

VOID

NibbleToChar

convert a nibble into a single hexadecimal (static - Only can be access within this file)

Parameters

value	<i>The value of the nibble</i>
-------	--------------------------------

Returns

the character of the Hexadecimal number if valid, otherwise, return ''.*

bytesToHexString.

Convert bytes into a hexadecimal string (static - Only can be access within this file).

Parameters

OutStr	<i>Output string.</i>
Value	<i>The value of bytes.</i>

Returns

VOID

vsprintf.

The actual function that perform the "printf" and "sprintf" function (static - Only can be access within this file).

Parameters

str	Output string.
format	The format of the string.
ap	the pointer of the first additional parameter.

Returns

0

sprintf.

Generate a formatted string.

%[-x]c output a character, '-' - align right, x - the output width

%[-x]s output a string, '-' - align right, x - the output width

%[{-,+}x]d output a character, '-' - align right, '+' - align right and display '+' sign, x - the output width

%[-x]X (capital 'X') output a hexadecimal number, '-' - align right, x - the output width

note: Output width will be ignored if width is smaller than actual length.

Parameters

str	- Output string.
format	- The format of the string.
...	- All of the additional parameters.

Returns

vsprintf(str, format, ap) - Return the string with its format and pointer.

- int [sprintf](#) (char *str, const char *format,...)

printf.

Print out a formatted string.

%[-x]c output a character, '-' - align right, x - the output width

%[-x]s output a string, '-' - align right, x - the output width

%[{-,+}x]d output a character, '-' - align right, '+' - align right and display '+' sign, x - the output width

%[-x]X (capital 'X') output a hexadecimal number, '-' - align right, x - the output width

note: Output width will be ignored if width is smaller than actual length.

Parameters

str	- Output string.
format	- The format of the string.
...	- All of the additional parameters.

Returns

vsprintf(str, format, ap) - Return the string with its format and pointer.

- int [printf](#) (const char *format,...)
- char * [strcat](#) (char *s1, const char *s2)
- int [isspace](#) (const char *c)
- void * [memset](#) (void *s, int c, size_t n)
- char * [strtok](#) (char *s1, const char *s2)

5.4.1 Detailed Description

Many usefull functions that used for handling string.

5.5.2.3 `#define E_INVUSRI 3`

5.5.2.4 `#define E_NOERROR 0`

5.5.3 Typedef Documentation

5.5.3.1 `typedef unsigned int error_t`

5.6 modules/r1/r1.c File Reference

The commandhandler and functions associations for Module R1.

```
#include "r1.h"
#include "sys_clock.h"
#include <string.h>
#include <core/serial.h>
#include <core/io.h>
```

Include dependency graph for r1.c:

Data Structures

- struct `function_name`

A structure to represent each function.

Macros

- `#define USER_INPUT_BUFFER_SIZE 1000`
- `#define MAX_ARGC 50`
- `#define MOD_VERSION "R1"`
- `#define COMPLETION "02/05/2016"`

Enumerations

CommandParserStat

The status of the command parser

- enum `CommandPaserStat` { `NotWriting`, `NormalWriting`, `DoubleQuoteWriting`, `SingleQuoteWriting` }

Functions

exe_function.

Executes the specific fuction.

Parameters

argc	<i>The number of tokens.</i>
argv	<i>The array of tokens.</i>

Returns

0

version

displays the version of the system currently running.

Parameters

argc	<i>The number of tokens.</i>
argv	<i>The array of tokens.</i>

Returns

0

shutdown

Closes all functions, and shuts down the system.

Parameters

argc	<i>The number of tokens found.</i>
argv	<i>The array of tokens.</i>

Returns

0 for shutdown, 1 for keep running.

help_usages

shows usage message for each function.

Parameters

start_from	<i>the index of the beginning function.</i>
------------	---

Returns

0

help_function

displays help text for all functions.

Parameters

argc	<i>The number of tokens.</i>
argv	<i>The array of tokens.</i>

Returns

0

commhand

Accepts and handles commands from the user.

Returns

0

- int [commhand](#) ()

command_line_parser

Splits the complete command line into tokens by space, single quote, or double quote.

Parameters

CmdStr	<i>The complete input command.</i>
argc	<i>The number of tokens found.</i>
argv	<i>The array of tokens.</i>
MaxArgNum	<i>The maximum number of tokens that array can hold.</i>
MaxStrLen	<i>The maximum length of each token that string can hold.</i>

Returns

void

- void [command_line_parser](#) (const char *CmdStr, int *argc, char **argv, const int MaxArgNum, const int Max↵StrLen)

print_help

prints the help message of a certain function that specified by the index number

Parameters

function_index	<i>The index number of that function.</i>
----------------	---

Returns

void

- void [print_help](#) (const int function_index)

5.8 modules/r1/sys_clock.c File Reference

The main file that manipulates and controls the system's clock.

```

#include "sys_clock.h"
#include "r1.h"
#include <string.h>
#include <core/io.h>
  
```

Include dependency graph for sys_clock.c:

Macros

- `#define RTC_INDEX_SECOND 0x00`
- `#define RTC_INDEX_SECOND_ALARM 0x01`
- `#define RTC_INDEX_MINUTE 0x02`
- `#define RTC_INDEX_MINUTE_ALARM 0x03`
- `#define RTC_INDEX_HOUR 0x04`
- `#define RTC_INDEX_HOUR_ALARM 0x05`
- `#define RTC_INDEX_DAY_WEEK 0x06`
- `#define RTC_INDEX_DAY_MONTH 0x07`
- `#define RTC_INDEX_MONTH 0x08`
- `#define RTC_INDEX_YEAR 0x09`

Functions

set_time_main.

Sets the time for the system.

Parameters

argc	The number of tokens found.
argv	The array of tokens.

Returns

0

- int `set_time_main` (int argc, char **argv)

get_time_main.

Retrieves system's current time.

Parameters

argc	<i>The number of tokens found.</i>
argv	<i>The array of tokens.</i>

Returns

0

- int [get_time_main](#) (int argc, char **argv)

is_digit

determines if a character represents a digit.

Parameters

ch	<i>The character</i>
----	----------------------

Returns

1 if it is digit, otherwise returns 0.

set_time_str.

Sets the time for the system by string.

Parameters

timeStr	<i>The string type of current Time.</i>
---------	---

Returns

0 if there is no error, otherwise return a error code.

- [error_t set_time_str](#) (const char *timeStr)

get_time.

Retrieves system's current time and date.

Parameters

dateTimeValues	<i>The value of current time and date</i>
----------------	---

Returns

VOID

- void [get_time](#) (date_time *dateTimeValues)

set_time.

Sets the time for the system by date_time struct.

Parameters

dateTimeValues	<i>The struct that holds the time values.</i>
----------------	---

Returns

0 if there is no error, otherwise return a error code.

- [error_t set_time](#) (const date_time *dateTimeValues)

get_date.

Retrieves system's current date.

Parameters

dateTimeValues	<i>The struct that holds the value of current date</i>
----------------	--

Returns

VOID

- void [get_date](#) (date_time *dateTimeValues)

is_date_value_valid.

Check if the date specified is valid, which means year should between 1970 ~ 1969, month should between 1 ~ 12, while the range of the day is based on the month and year.

Parameters

year	<i>The value of the year</i>
mon	<i>The value of the month</i>
day	<i>The value of the day of month</i>

Returns

VOID

set_date.

Sets the date of the system.

Parameters

dateTimeValues	<i>The struct that holds the value of date</i>
----------------	--

Returns

0 if there is no error, otherwise return a error code.

- [error_t set_date](#) (const date_time *dateTimeValues)

get_date_main.

Retrieves system's current date.

Parameters

argc	The number of tokens.
argv	The array of tokens.

Returns

0

- int [get_date_main](#) (int argc, char **argv)

set_date_str.

Sets the date for the system by string.

Parameters

str	The string type of current date.
-----	----------------------------------

Returns

0 if there is no error, otherwise return a error code.

- int [set_date_str](#) (const char *str)

set_date_main.

Sets system's date.

Parameters

argc	The number of tokens.
argv	The array of tokens.

Returns

0

- int [set_date_main](#) (int argc, char **argv)

5.11.4.8 `error_t resume_pcb (struct pcb_struct * pcb_ptr)`

5.11.4.9 `error_t set_pcb_priority (struct pcb_struct * pcb_ptr, const unsigned char pPriority)`

5.11.4.10 `struct pcb_struct* setup_pcb (const char * pName, const unsigned char pClass, const unsigned char pPriority)`

5.11.4.11 `void show_all_processes ()`

5.11.4.12 `void show_blocked_processes ()`

5.11.4.13 `error_t show_pcb (struct pcb_struct * pcb_ptr)`

5.11.4.14 `void show_ready_processes ()`

5.11.4.15 `error_t suspend_pcb (struct pcb_struct * pcb_ptr)`

5.11.4.16 `error_t unblock_pcb (struct pcb_struct * pcb_ptr)`

5.12 modules/r2/pcb_comm.c File Reference

The main functions that manipulate the PCB.

```
#include "pcb_comm.h"
#include "pcb.h"
#include "../errno.h"
#include "../mpx_supt.h"
```

Include dependency graph for pcb_comm.c:

5.12.1 Detailed Description

The main functions that manipulate the PCB.

5.13 modules/r2/pcb_comm.h File Reference

The main functions that manipulate the PCB.

This graph shows which files directly or indirectly include this file:

Functions

- int [suspend_pcb_main](#) (int argc, char **argv)
- int [resume_pcb_main](#) (int argc, char **argv)
- int [set_pcb_priority_main](#) (int argc, char **argv)
- int [show_pcb_main](#) (int argc, char **argv)
- int [show_all_processes_main](#) (int argc, char **argv)
- int [show_ready_processes_main](#) (int argc, char **argv)
- int [show_blocked_processes_main](#) (int argc, char **argv)
- int [create_pcb_main](#) (int argc, char **argv)
- int [delete_pcb_main](#) (int argc, char **argv)
- int [block_pcb_main](#) (int argc, char **argv)
- int [unblock_pcb_main](#) (int argc, char **argv)

5.13.1 Detailed Description

The main functions that manipulate the PCB.
